

# Austral Contamination Project

## Detailed Site Investigations Report

Contamination Assessment was carried out for stockpiled materials that required material assessment, testing, analysis and reporting according to the Contamination reporting guidelines by the EPA NSW. CESSoils verified the soils and material onsite with site visits as directed by Liverpool Council.

The soils were eventually supplied with compliance certificates so that they could be legally removed offsite. A formal, detailed site investigation was written and submitted to Liverpool Council. The clients were able to carry on working, and they avoided all possible penalties.

The Council accepted the DSI outlining the soils reused and soils taken to the landfill.
